AI Voice & Video Generators

The Basics

- AI programs create realistic voice and video content used for podcasts, social media content, marketing, e-Learning, training videos and more!
- Require signing up for an account to access the program online or through desktop / mobile apps.
- Free accounts have limited options. Most require paying for a subscription to remove watermarks and use more features.

Voice Generators

- Text-to-speech (TTS): Type text that the AI transforms into natural-sounding speech.
- Voice cloning and reading assistance
- Editing capabilites to customize voices
- Examples: **ElevenLabs**, **Murf AI**, **Speechify**

Video Generators

- Text-to-video: Type an idea or prompt (instructions) and AI creates a video in minutes.
- AI editing features, digital avatars, and animation
- Examples: **Invideo AI**, **Synthesia**, **Fliki**

Tips

- Check privacy policies and terms of service / use
- Search the site for info regarding copyright policies and user agreements (what content is allowed / prohibited).
- Consult the Help resources online.
- Don't provide personal information.
